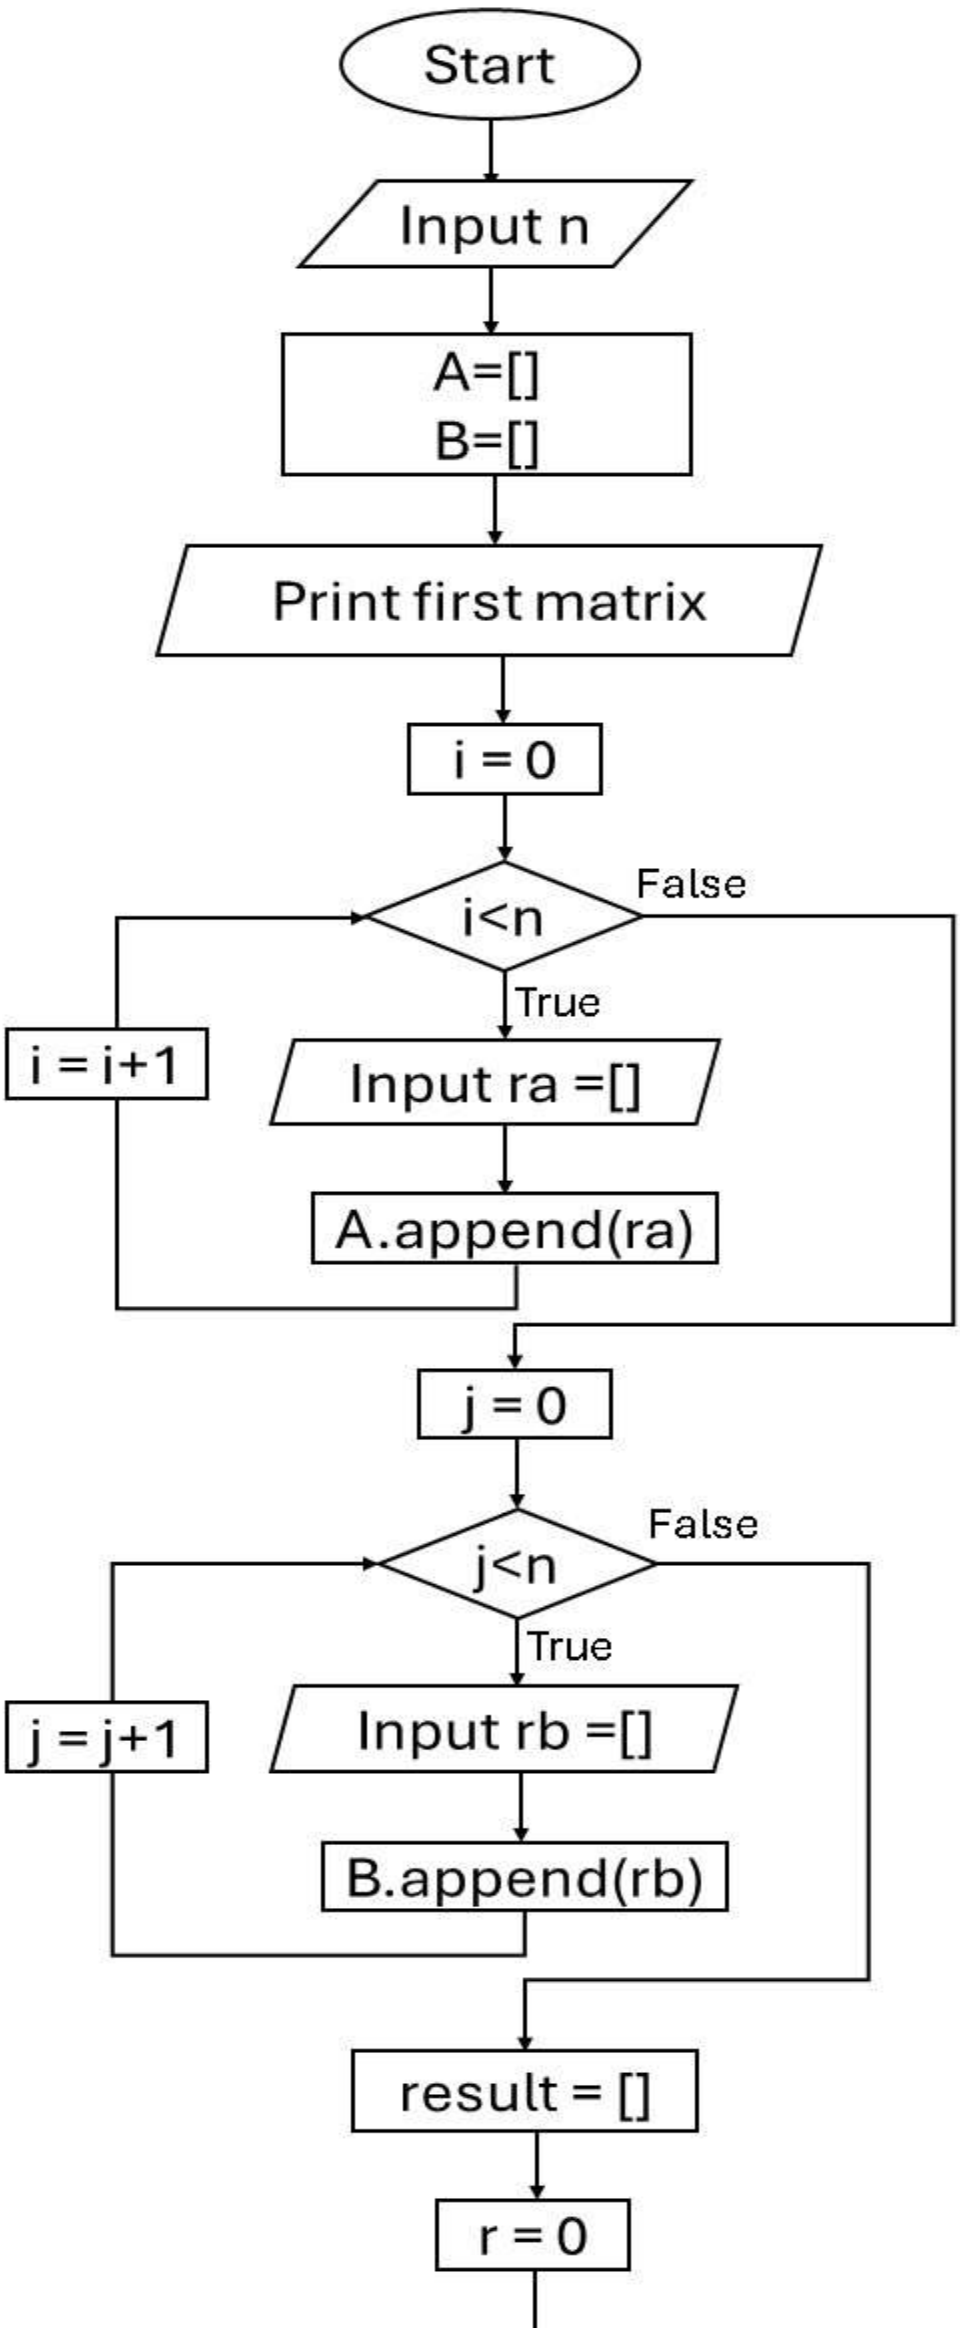
Experiment 8

8.1.1 Multiplication of Two Square Matrix

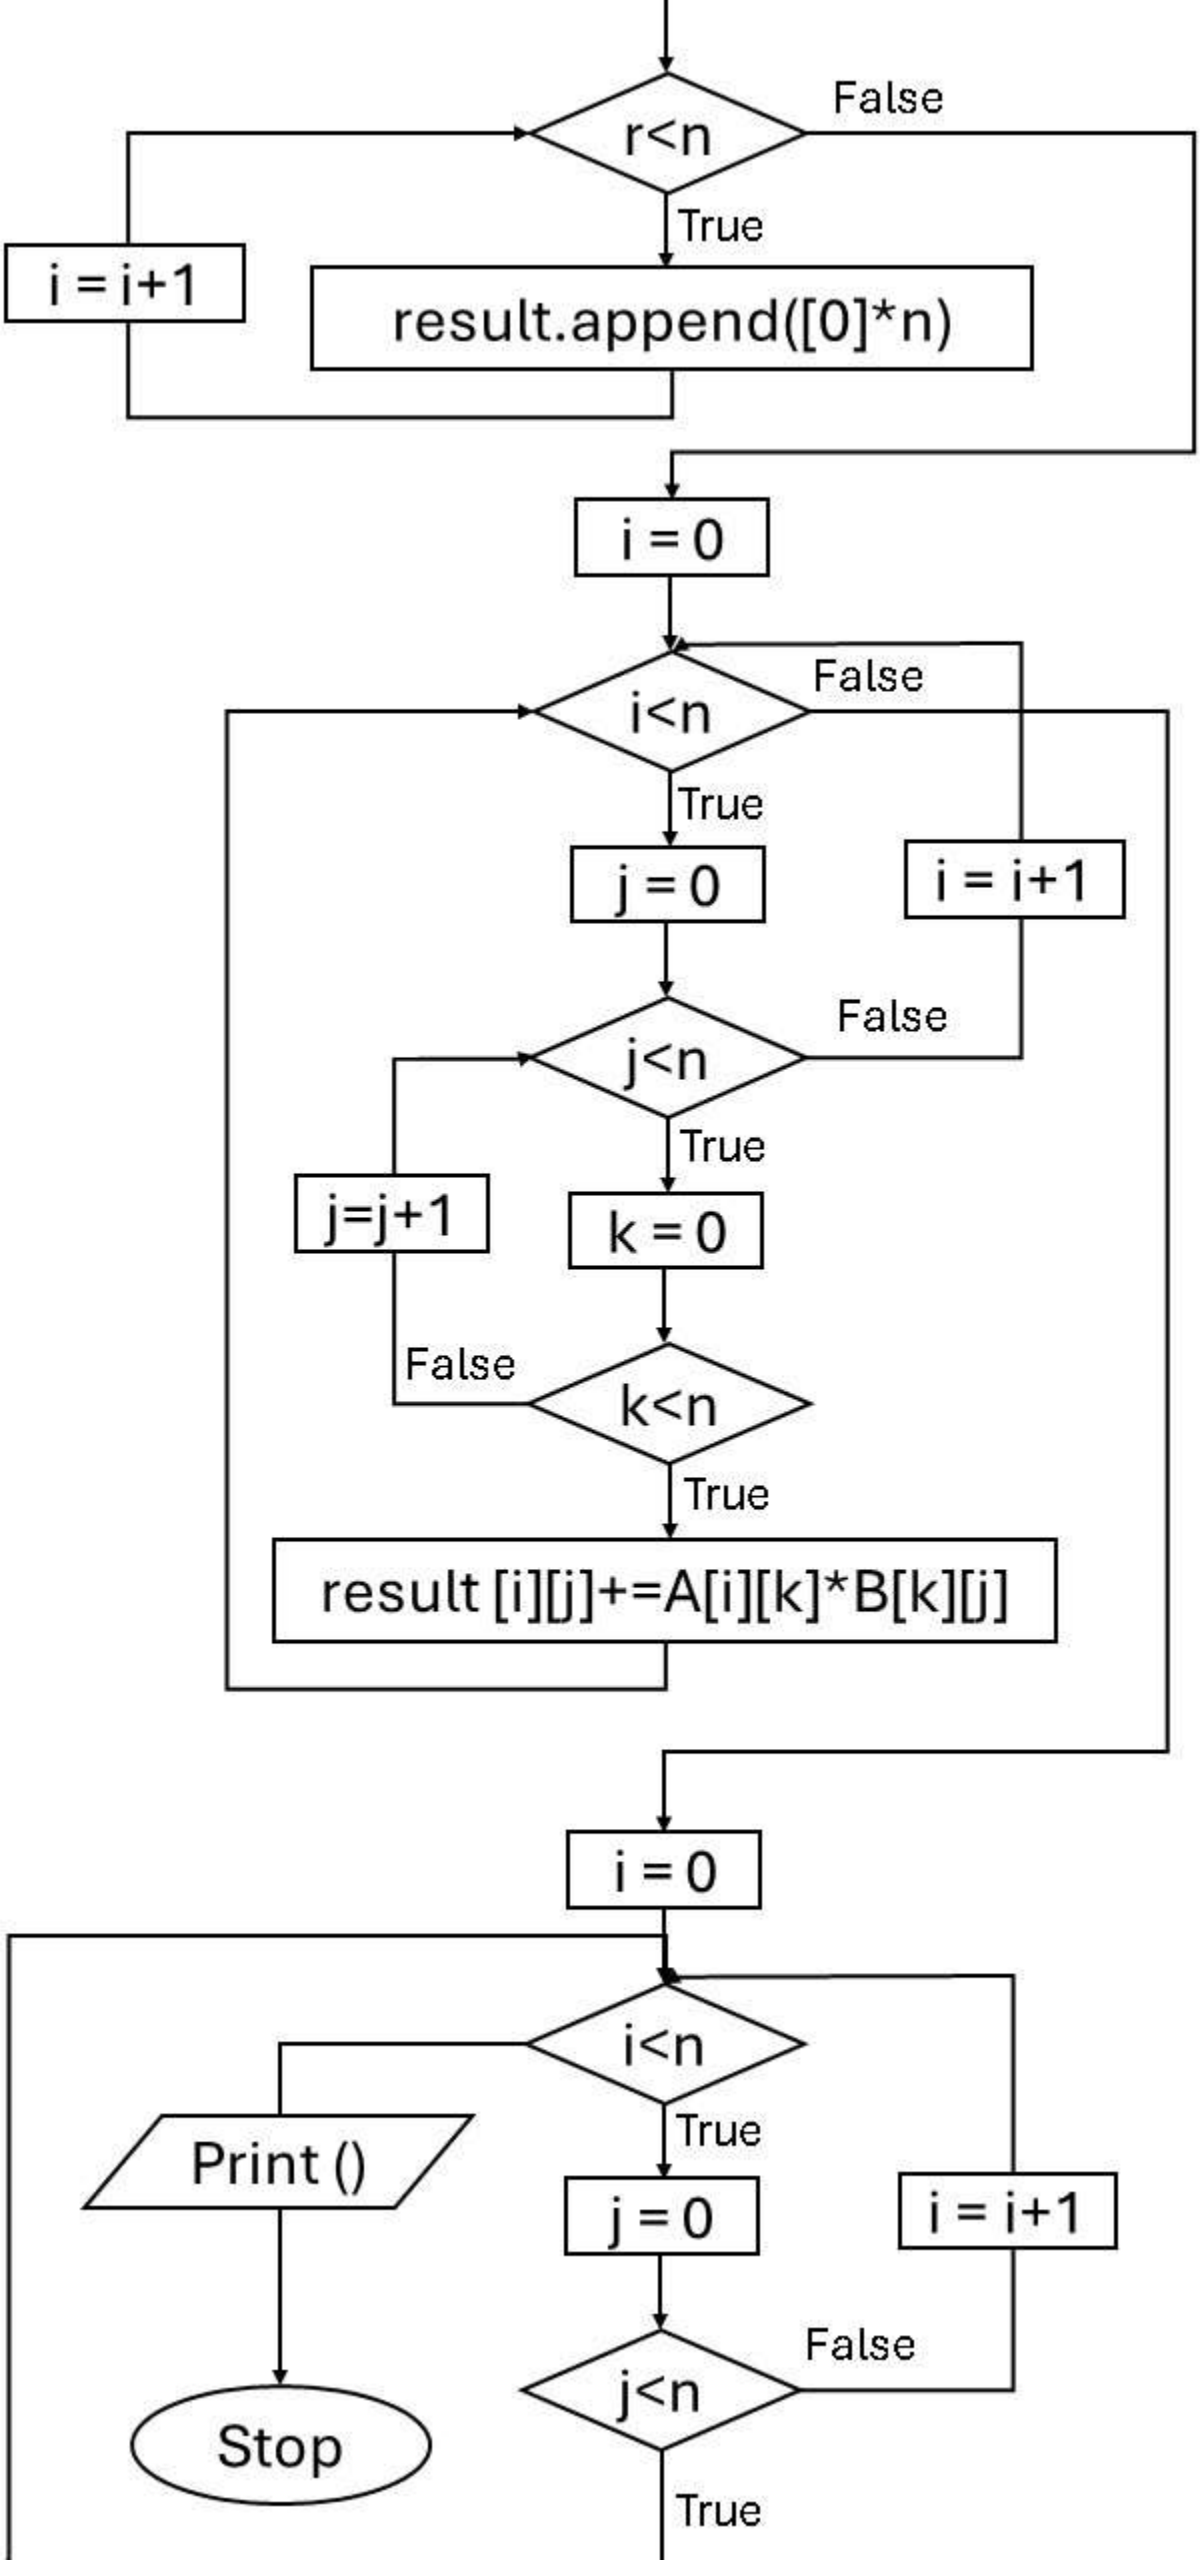
Algorithm :

```
Step 1: Start
Step 2: Input Dimension (n)
Step 3: A=[]
        Create an empty list A
        Set loop a in range 0 to n:
        Input a row of integers and append to
    A
Step 4: B=[]
        Create an empty list B
        Set loop b in range 0 to n:
        Input a row of integers and append to
    B
Step 5: Result =[]
        Create an empty list result
        Set loop r in range 0 to n:
        Append a list of n zeros to result
Step 6: Multiplication of Matrix
        Set loop i in range 0 to n:
        Set loop j in range 0 to n :
        Set loop k in range 0 to n :
            result[i][j] += (A[i][k] * B[k][j])
Step 7: Print Resultant Matrix
        Set loop i in range $0$ to $n$:
        Set loop j in range $0$ to $n$:
        If j is the last index :
            Print result[i][j] (end="")
        Else:
            Print result[i][j](end="  ")
    Print a new line.
Step 8: Stop
```

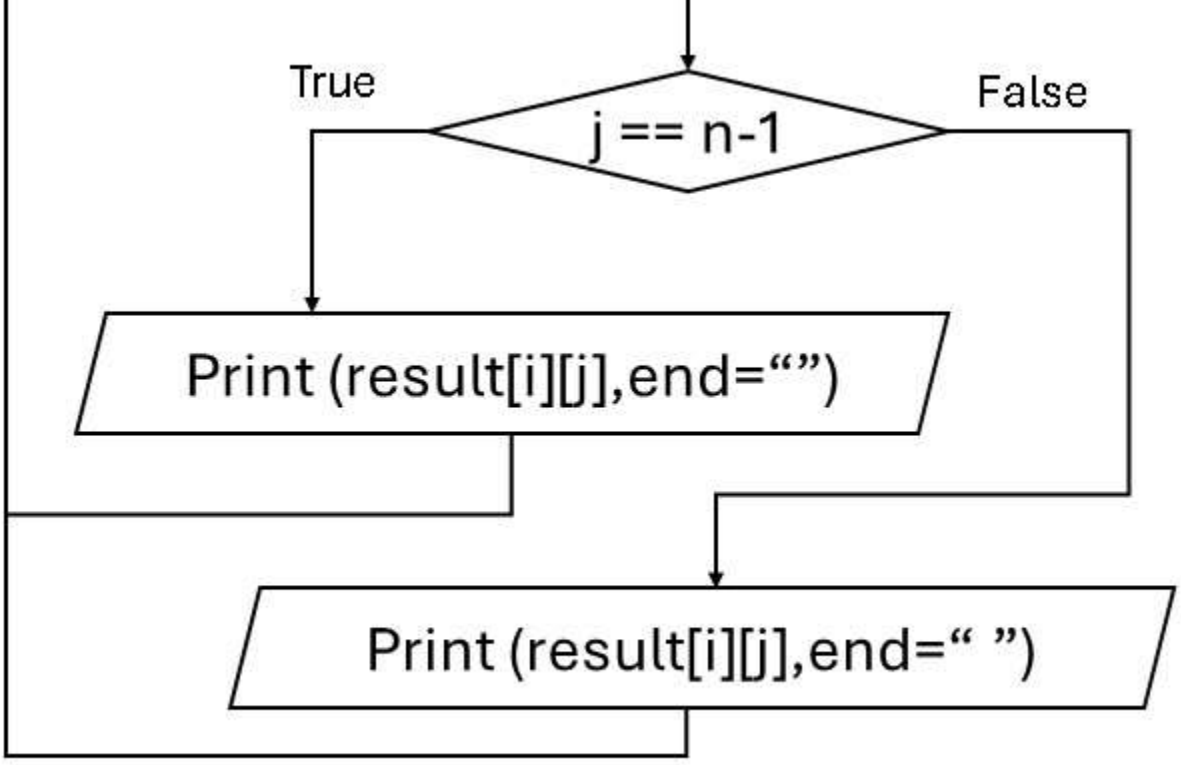
Flowchart :



Start
Input n
A=[]
B=[]
Print first matrix
i = 0
i<n
False
True
i = i+1
Input ra =[]
A.append(ra)
j = 0
j<n
False
True
j = j+1
Input rb =[]
B.append(rb)
result = []
r = 0



r<n
False
True
i = i+1
result.append([0]*n)
i = 0
i<n
False
True
j = 0
i = i+1
j<n
False
True
j=j+1
k = 0
False
k<n
True
result [i][j]+=A[i][k]*B[k][j]
i = 0
i<n
True
Print ()
j = 0
i = i+1
j<n
False
Stop
True



True
j == n-1
False
Print (result[i][j],end="")
Print (result[i][j],end=" ")

Code :

```
n=int(input("dimension: "))
A=[]
print("first matrix:")
for a in range(n):
    ra=list(map(int,input().split()))
    A.append(ra)
B=[]
print("second matrix:")
for b in range(n):
    rb=list(map(int,input().split()))
    B.append(rb)

result=[]
for r in range(n):
    result.append([0]*n)

for i in range(n):
    for j in range(n):
        for k in range(n):
            result[i][j]+=A[i][k]*B[k][j]

print("Resultant Matrix:")
for i in range(n):
    for j in range(n):
        if j==n-1:
            print(result[i][j],end="")
        else:
            print(result[i][j],end=" ")
    print()
```

8.1.1. Multiplication of Two Square Matrices

21:02

Write a Python program to perform the multiplication of two square matrices. The program should take two matrices as input and output their product.

Input Format:

- The first line prints the "dimension: " and reads an integer n, representing the dimensions of the square matrices $(n \times n)$.
- The second line prints: "first matrix:" and then reads n lines, each containing n integers separated by spaces, representing the rows of the first matrix.
- Next line prints: "second matrix:" and then reads n lines, each containing n integers separated by spaces, representing the rows of the second matrix.

Output Format:

- Print "Resultant Matrix:" followed by n lines, each containing n integers separated by spaces, representing the product of the two matrices.

```python
n = int(input("dimension: "))
A = []
print("first matrix:")
for i in range(n):
    row = list(map(int, input().split()))
    A.append(row)
B = []
print("second matrix:")
for i in range(n):
    row = list(map(int, input().split()))
```

Average time	Maximum time
0.011 s	0.013 s
11.25 ms	13.00 ms

2 out of 2 shown test case(s) passed

2 out of 2 hidden test case(s) passed

Test case 1 10 ms Debug

Expected output	Actual output
dimension: 2	dimension: 2
first matrix:	first matrix:
1 2	1 2
3 4	3 4
second matrix:	second matrix:
5 6	5 6
